

MultiClient OnDemand

A PGS OnDemand presentation

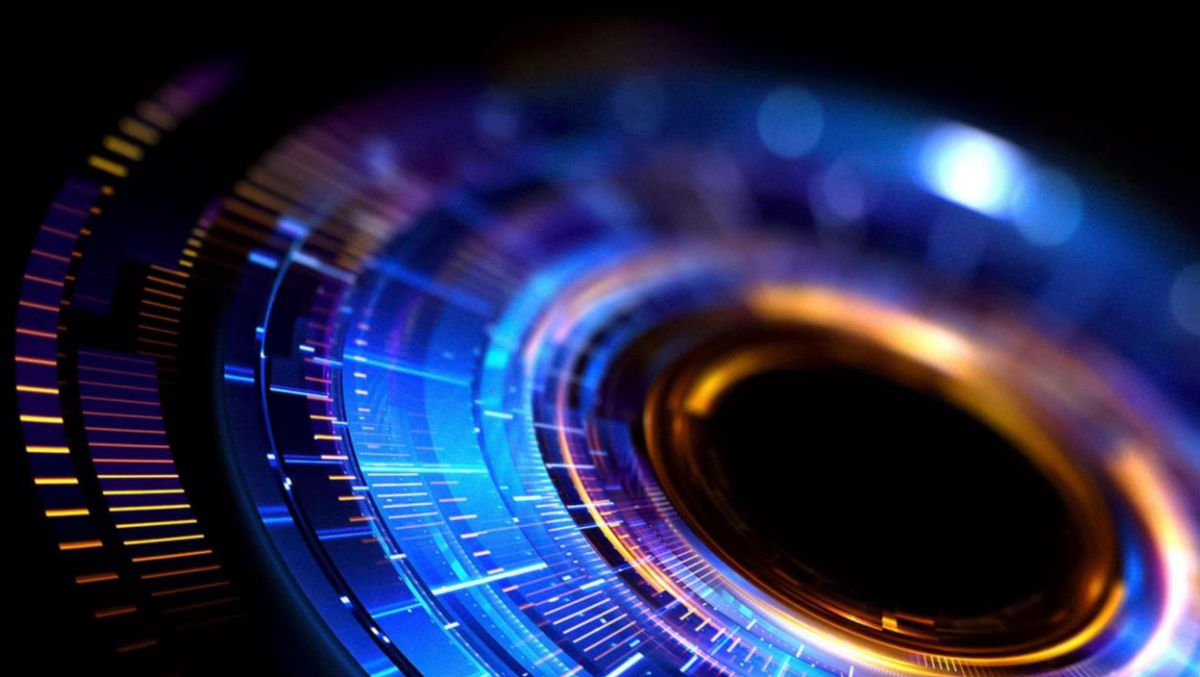

**The energy industry is changing fast:
driven by decarbonization, security, and
affordability. This makes today's exploration
decisions more time critical than ever.**

**Traditional practice dictates a few datasets
of interest are licensed in any given year.**

Yet finding data and negotiating the deal adds delay. It's detailed work that draws attention away from wider exploration goals.

CHALLENGE

What if you could access as much of the data you need, whenever you want, in the timeframe you require?

INTRODUCING

MultiClient OnDemand

Cloud-enabled subscription access
to PGS library seismic data, at
speed and at scale

Tailored library access

Define your timeframe and your
geographical focus

Freedom to Focus

Make rapid, informed decisions to keep pace with today's fast-changing exploration landscape.

The background of the slide features a dense field of blue fiber optic cables on the left side, which fan out towards the right. The cables are illuminated from the left, creating a bright, starburst-like effect. The rest of the background is a dark blue gradient.

Focus on Exploration

Scan and evaluate multiple opportunities to reduce investment risk

Access regional prospectivity, evaluate specific blocks or establish CCS suitability.

In multiple basins, simultaneously

You choose where to focus

Less Distraction, More Action

MultiClient OnDemand lets you focus on your priorities:

- Quickly locate the right data for your needs
- Overcome internal investment hurdles
- Explore more options by expanding your reach
- Exhaustively mitigate your risk
- Respond faster than ever before to opportunities
- Build out your portfolio

Time for Action
